

Weinstein's.

HELENA—Sixth and Main.
NEW YORK—165 Sixth Av.

Nearly everybody in this vicinity knows how much money is to be saved by buying here for cash—but many people think they can't pay cash. That's a big mistake. There's no need for any one to buy on credit. It's nearly all habit and carelessness. Try buying for cash for a month and you'll be surprised to find how much cash you have to buy with—if you buy here.

"The best is the cheapest," and especially in laundry utensils. It might be made to read "the best is cheaper than the cheapest" to fully express the meaning of the prices we quote for to-day. Special to-day:

Daisy clothes wringer, \$1.50
Polished copper wash boiler, No. 8 or No. 9 size, flat or pit bottom, 1.95
Wood fiber wash tubs, large size, 23-inch diameter 1.60

Orford Blend, 1 lb.	35
Richmond Gum, Curly Cut, 1 lb.	35
Lone Jack, 1 lb.	35
El Comandante, 1 lb.	35
Washburn, 1 lb.	35
Old Judge, 1 lb.	35

GOOD TIMES FOR BELT.

A Hundred Thousand Dollars to Be Expended by the Castner Coal and Coke Company.

Big Coal Washing Plant and One Hundred Coke Ovens to Be Built.

Tests Very Satisfactory and the Work to Be Completed not Later Than Nov. 1, This Year.

Four months ago we stated, says the Great Falls Tribune, that if the tests the Castner Coal and Coke company were making at Belt proved satisfactory that the manufacture of coke at Belt would be the immediate result.

It was with the greatest satisfaction that the news was received yesterday that the results obtained were excellent and the preliminary work will be commenced at once for washing plant and ovens.

Early last, viz. P. J. Shields, the superintendent of the coal company at Belt, built an oven to experiment with the coking qualities of the slack from No. 2 tunnel. The results showed that with washing a No. 1 article of coke could be produced.

In the early part of June L. D. Ross, who has had an extended experience in the slack business, procured test samples of the slack and June 13 forwarded them to the United States Coal Washing company, Chicago.

The sample tests sent by Mr. Ross were large and exhaustive, and on their arrival at Chicago were analyzed by the company. The test results showed:

Unwashed coal, ash 18.83, sulphur 4.32. Washed coal, ash 5.50, sulphur 2.43. Unwashed coal, fixed carbon 43.73. Washed coal, fixed carbon 49.39. Specific gravity of coal, 1.33. Specific gravity of dirt 2.59.

The tests were taken from the slack pile of No. 2 tunnel, which probably contains 400 to 500 tons, and is taken from the whole thickness of the vein.

This United States Coal Washing company have erected 250 of their plants in America and Europe. The average amount of ash in the washed coal for all their plants is 4.33. That of Belt is 5.50. The average amount of ash in the unwashed coal used in all their plants is 16.25 (reckoning as high as 27). That of Belt is 18.83. A. Cunningham, the manager of the company and owner of half the stock, was quick to grasp the possibilities of the coking qualities of the Belt coal. Though the samples only left G. at Falls June 13, in spite of the delays caused by the late returns of the test were received by the Castner Coal and Coke company July 13, and within five days of that date contracts were signed for the construction of the coal washing works at Belt.

On July 24 the contract was signed at Butte, and agreed to by James Shields, president of the Castner Coal company, and A. Cunningham, to construct at Belt a 250-ton washing plant, to be completed by Nov. 1 and to cost \$40,000.

Mr. Cunningham leaves Great Falls for Belt this morning to select the site for the washing plant, and have the ground broken for the foundation of the massive building. The building will be three stories in height, with coal elevators, coal hoppers for 400 tons, and a huge settling tank. The motive power will be a pair of 125-horsepower steam engines. The water required for the washing can be easily obtained from the mine, as the same amount of water can be used repeatedly over again. The separators in the building will size the coal into the various hoppers from one and a half inch down, till the residue reaching the last stage from the jigs will only size the thirty-second of an inch. The capacity of the plant will be 250 tons every ten hours, the daily supply being taken from the screen at the end of dump. This capacity is sufficient for the present and can in the future be increased to any amount required.

The process used is the Lubriz patent and is extensively used in Europe by the United States Coal Washing company controlling the patent rights in this country. The largest plant erected by them in the United States is a 1,000-ton plant at Birmingham, Ala., but plants of 1,000-ton capacity in ten hours have been erected in England and Scotland.

It has now been decided by the tests made that the coal slack will furnish 60 per cent merchantable coke with 11 to 12 per cent ash after passing through the Lubriz process and the result will be the utilizing of this large product.

The Castner Coal and Coke company are going to break ground at once for the erection of 100 best-bivalve coke ovens of a diameter of sixteen feet each. The first brick used in their erection will be sent from Anaconda, the other brick required will be manufactured at Belt, most probably by the firm of Goss & Shields. The total number of brick required for the coke ovens, and the cost of the ovens without the required tracks will be about \$50,000. The capacity of the ovens will be 100 tons every twenty-four hours, half the ovens being used alternately. These ovens will be erected by the company and not by contract, and it is intended that they shall be completed by November, about the same time as the washing plant.

The completion of the works now ordered to be erected will double the capacity of labor at Belt. It will add an increased payroll to the industrial sections in the vicinity of Great Falls. It also means that a very large amount of money sent elsewhere by Anaconda for coke will be distributed in this section. Tens of thousands of dollars now being sent to Rock Springs, in Wyoming, will in the future go into the pockets of the industrious miners of Belt.

There are the mines of Lewis, Millard, Martin, besides the other coal mines at Armstrong. The vein worked at the various mines is the same, and the character of the coal seems to be identical. The gas-producing qualities of the slack at the different mines are known to be superior to any other in Montana. The iron ore in the section of the tests so satisfactory of the coal slack in the Castner company mines, will, if tried on the product of the other mines at Belt Armstrong be found equally satisfactory with a margin. The coal washing plant now to be erected will be the last one on Belt, nor will the next of ovens now to be built be the only one.

It is now only a mere matter of development, when this section will be the great coal and coke industrial center of Montana, and Belt and Armstrong will be one city. In conclusion it might be stated that Belt, the pioneer coal camp of Montana, though quiescent for a number of years for want of cheap transportation, is now going to occupy her proper position, and from this on she will force rapidly to the front, her boundless coal deposits will be worked and utilized, and her valley will now within a brief period witness one of those sudden transformations peculiar to this section, of an agricultural community in a few months being turned into a manufacturing industrial center.

Farmers' fast black horses is the best, and the one here can show a full line of them at popular prices. A souvenir will be given to every purchaser of these horses this week. No sure and real.

A Delightful Trip.

THE U. S. N. U.

The Organization of a State Central Lodge Completed in This City.

For a week or more a number of gentlemen who follow the business of sheep shearing have been in Helena, called here for the purpose of forming a state central lodge of the United Shearers National union. Within the past year local lodges of shearers have been organized in the various sheep growing sections of the west, and this meeting at Helena was for the purpose of forming a state lodge, and arranging to have a delegate attend a national convention of shearers that will be held in the spring, for the purpose of forming a national organization. It will be news to many to know that there are in the western states in which wool growing is a business over 7,000 shearers. In past years these men have not had an organization, because, as wool was high, and the prices paid have been quite considerable. It is to establish a scale of prices and otherwise regulate the conduct of those following shearing as a business that the unions have been organized. There are now four unions in Montana, with a total membership of over 500. The unions are located at Billings, Big Timber, Merle and Helena. All of these lodges had representatives at the meeting held in this city, which resulted in the organization of the state central lodge. This lodge fixed the prices for shearing in Montana for union men at seven cents and board, or eight cents and a half, where the shearers shorn himself. This is the price paid during the past season where there was a union, while in those localities where there was no union the price paid was six cents and board. In past years the price has been eight cents and board, or ten cents; while the shearers boarded themselves.

The state central lodge elected the following officers: President, Alonzo Prather, of Billings; secretary, John Elliott, of Melville; James Gormley was appointed organizer for Northern Montana. May 23, 1894, a meeting of the state central lodge will be held at Livingston. The supreme lodge will be organized next February, the meeting for that purpose to be held at Reno, Nevada, according to the present arrangement. Frank Norland, who has the reputation of being the most expert shearer in the country, will represent the Montana state central lodge at that meeting. The states that will compose the membership of the national body are Wyoming, Idaho, Utah, Colorado, Arizona, Nevada, California, Oregon, Texas and Montana.

PERSONAL.

Sam Gordon, of Miles City, is in town and is staying at the Helena.

W. B. Davis, superintendent of the Tremont Mining company, of Gould, is in the city.

Geo. W. Reeves, of Missoula, populist candidate for judge of the supreme court, is in town.

Hon. D. E. Folson, state senator from Meagher county, is over from White Sulphur Springs.

Mrs. Jennie Crosby and daughter, who have been in Europe for several years, are expected home to-morrow.

C. Y. Reeder, formerly of Beaverhead county, is now located at Johannesburg, South Africa, and engaged in the mining industry.

Arrivals at the Grand Central:

NOTE.—Five trains daily from Twin Cities to Chicago; one to St. Louis and one to Kansas City.

Shenandoah Valley Lands.
Why go West when such grand opportunities exist in West Virginia, Maryland and the famous Shenandoah Valley, Virginia, a section possessing all the requisites for health, comfort and prosperity.

No region in the United States is attracting greater attention; people from the North and West are looking that way with a view of locating. Improved farm lands are to be obtained at from \$5 per acre and upwards, unimproved timber lands at from \$2 to \$5 per acre.

THOMAS HANLON DEAD.

While in ill-health, He Shoots Himself in the Head.

News has been received in Helena of the suicide of Thomas Hanlon, in New York city. According to the dispatch Mr. Hanlon was in very poor health. Friday, July 20, he complained of pain in his head, but went to work as usual. In the evening he complained of sickness, and picked up his revolver, which he handled in such an alarming manner that his wife took it away from him and hid it. Next day he took to his bed. How he got the revolver again no one knows, but on Saturday evening he was found dead in bed, having shot himself in the left breast and head.

Mr. Hanlon was at one time a broker in New York city. Later he came to Montana, where he represented Hershfield Brothers in various interests, buying wool, etc. When he died he was acting as cashier in the New York office of the Mutual Life Insurance company. He was forty years of age, was born in England, graduated at Oxford, and came to America in 1873. Mr. Hanlon was a member in good standing of Helena lodge, No. 133, B. P. O. E. This is the second death among Helena Elks, the first having been the late James Faulkner, who signed the recommendation which admitted Hanlon to the lodge.

25-inch fancy dress cambric worth 35c, this week at the Lee Hive only 15c.

Special Meeting.
There will be a special meeting of the Montana Society of Civil Engineers, on Saturday evening at 8:30 p. m., at the office of Sizer & Keel, Atlas block, Helena. By order of the president.
